# Food Loss and Waste Commitments

---

PTG Energy Public Company Limited and its subsidiaries (“**the Group**”) operate the business with a focus placed on maintaining the balance of economy, society and the environment to ensure shared values for stakeholders throughout the supply chain. The Group, as a retail, food and beverage business operator with its portfolio covering Max Mart convenience store and Pun Thai Coffee, aims at promoting sustainable food consumption and production in accordance with the United Nations Sustainable Development Goal No. 12 as part of achieving the efficient use of natural resources, and food waste generated GHG reduction. The Group thus formulates a policy to manage food loss and food waste to fortify its commitments to reducing food loss and waste during procurement, production, and distribution to customers and seeking ways to maximize the efficiency of food waste in the long run.

## Scope

1. This policy encompasses business operations of the PTG Energy Group.
2. This policy is applied to directors, executives, and employees of all levels within the Group, which shall be observed as a work guideline to promote sustainable food consumption and production.

## Definitions

**Food Loss** refers to food that is left behind, destroyed, decreased in quality, spoiled, lost before it reaches the consumers.

**Food Waste** refers to food waste that cannot be consumed. May be left from consumption, such as fruit peels or is a food that we leave to expire until unable to consume.

## Guidelines

### 1. The limited volume of food waste

The PTG Energy Group has a guideline in place to monitor the amount of food waste whereby food waste generated by its affiliated companies shall be limited to a predetermined level in order to effectively manage food waste. In addition, the Group also rolls out plans to manage and put potential situations under control so that food waste can be minimized; for instance, bringing products before expiration to reduce the price to encourage purchase and reduce the amount of food discarded.

### 2. Utilization of food waste

The Group encourages its affiliates to use or process food waste instead of discarding it using conventional methods. For example, fertilizing plants around its coffee shops using coffee grounds.

### 3. Responsible procurement and selection of suppliers

The PTG Energy Group defines supply chain management strategies by promoting the responsible procurement and selection of suppliers with a focus placed on those who have the potential for environmental impact management.

### 4. Disclosure of the volume of food waste

The PTG Energy Group requires transparency in the food waste practice to ensure that it has acted in line with the international corporate sustainability reporting principles, which allows the company to constantly develop operation guidelines for waste reduction.
