Sustainable Packaging Policy

PTG Energy Public Company Limited and its subsidiaries ("the Group") has attached considerable importance to the mitigation of environmental impacts contributed by business activities. The Group thus formulated a policy in regard to sustainable packaging, aligning with the Reduce, Reuse and Recycle principles (3Rs). The Group actively encourages reduced use of plastics and promotes biodegradable packaging designs and eco-friendly production, considering them as a way to express its responsibilities towards the society and the environment. Moreover, optimisation of resources and greater responsiveness to consumers' trends towards the environment are underlined.

Scope

1. This policy encompasses business activities of PTG Energy Group.
2. This policy is applicable to the Group's directors, executives and employees of all levels, and is to be observed as a guideline.

Definitions

Reduce means reducing waste generated by industrial plants; reducing overconsumption; efficiently using resources to lessen waste generation.

Reuse means reusing a material or different types of packaging such as paper, glass, metal, plastics that are still usable to attain the greatest value possible.

Recycle means reusing waste or a used material by having it undergone a recycling or treatment process to restore waste of which the quality is equivalent or similar to that of the original, or to obtain a new material or product.

Guidelines

1. Be determined to increase the proportion of recyclable materials used in packaging without compromising the quality.
2. Encourage reduced use, reusing or recycling of non-biodegradable plastics; for example, encourage reusing of oil gallons and refrain from using of plastic bags.
3. Motivate all relevant parties to create quality and eco-friendly packaging designs and preferably work with partners/suppliers that deliver or produce quality and green packages.
4. Foster the culture of sustainability where employees within the organisation use less packages and advocate environmentally-friendly materials and strengthen awareness regarding the same.

Review of the Sustainable Packaging Development Policy

The Company shall review and ensure the applicability of the Sustainable Packaging Development Policy to approve its suitability for the Group's business operations. Therefore, policy review shall be conducted at least once a year.
